## Appendix A

## Save the Deanes

## methodology

They have identified 2604 possible new builds within close proximity to the Deanes and have made the following assumptions:

1. That 372 homes will be built each year for a 7 year period and that these will be a mix of 1 bed, flats, and houses.
2. Using the Schools Service methodology for calculating pupil yield they have calculated that there would be a need for approx. 429.45 primary/junior school places and 286.3 secondary school places
3. Over a 7 year period that's 61.35 primary/junior school places and 40.9 secondary school places per year.
4. They have allocated the 40.9 secondary children equally over the 5 year groups, for each of the 7 years.
5. They have allocated the 61.35 primary/junior school places equally over the 7 years.

6 Please see below their proposed impact of new builds on the predicted intakes and number on roll at the Deanes School:

The following table sets out the impact of the new builds on the predicted intakes and number on roll at the Deanes School resulting from the 2600 predicted units.
