The National ACPO definition of domestic abuse was adopted by the force in April 13. Adopting the national definition changes the age at which a person is recorded as being a victim of domestic abuse to 16 years old and widens the relationships that are seen as domestic (for example, incidents between siblings are now included in the new national domestic abuse definition). Due to this change it would be misleading to compare 2013-14 data with figures for 2012-13.

Adult re-offending rate	27.4%	24.6%	-2.8%	Improved (6.4% pt.)

Work is on-going to develop the most informative measures of reoffending. Specifically, the Force is working with the Probation Service and other partners to develop data to inform Integrated Offender Management. Until this work is completed, for this document the data shown above are based on offender information taken from the Police CrimeFile system rather than on 'proven' reoffending data from PNC. The data are 6 months in arrears to allow time for the police to establish who the offenders are for a crime.

Management Information

Data for April to July 2012 has been re-run and as such is not strictly comparable with April to July 2013. This is because there has been a longer period of time for the 2012 incidents to have been closed with the most appropriate qualifiers.

Incidents may contain all three qualifiers (drug, alcohol or mental health). The qualifiers used to close the incident as drug/alcohol/mental health-related are assigned by the Force Control Room call taker at their discretion.

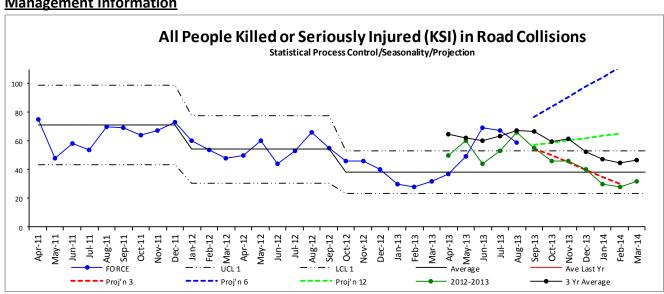

5. Improving Road Safety

The all crime MSF rankings are for the 3 months to July 2013.

The all crime solved rate MSF ranking is no longer available.

The last two measures in the table above are from the Crime Survey for England and Wales. Data and MSF ranking are for the 12 months to March 2013.

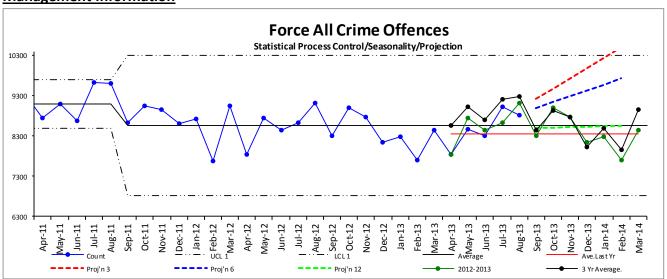

MSF ragging – green is better than the MSF average, red is worse and black is the same as the average.

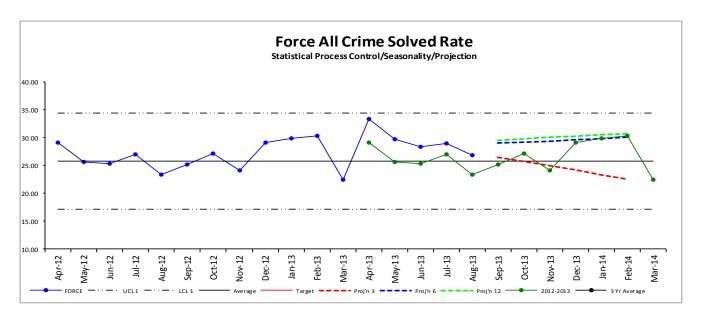

Repeat victimisation is defined as more than one criminal offence against a victim or premises within a twelve month period. This is identified on CrimeFile by the application of a marker and based on information available to the Crime Bureau at the time of input. The Performance Information Unit has identified anomalies with the application of this marker by making calculations based on a victim's name and date of birth and has therefore now used these calculations to produce figures on repeat victimisation.
