

LABOUR AMENDMENT TO MOTION

Moved by Councillor Young and seconded by Councillor Reid

Amend the motion to read (inserted words shown underlined, removed wording shown ~~scored~~):

'Local Government has a critical role to play in an effective and just transition to a zero carbon Britain. Many of the solutions are best tackled locally with cities, towns and rural communities working together.

A part of that solution is to embark on an ambitious programme of tree planting, similar to that proposed by Chelmsford City Council. This would, over a ten-year period, mean that a tree would be planted for every resident in Chelmsford.

Given the climate and ecological situation there should be a focus on productive trees, for food and other uses, i.e. fruit and nut trees and those for coppicing for timber, fibre and energy.

This Council therefore calls upon the Cabinet Member for Environment and Waste to support Chelmsford and any other Essex Councils with similar ambitions, by making available suitable green spaces in its ownership for tree planting. Not only will this help reduce carbon in the atmosphere, as trees fix carbon in living biomass and soils for decades, but it will enhance the landscape, townscape and create habitat for wildlife.'

Amended Motion:

'Local Government has a critical role to play in an effective and just transition to a zero carbon Britain. Many of the solutions are best tackled locally with cities, towns and rural communities working together.

A part of that solution is to embark on an ambitious programme of tree planting, similar to that proposed by Chelmsford City Council. This would, over a ten-year period, mean that a tree would be planted for every resident in Chelmsford.

Given the climate and ecological situation there should be a focus on productive trees, for food and other uses, i.e. fruit and nut trees and those for coppicing for timber, fibre and energy.

This Council therefore calls upon the Cabinet Member for Environment and Waste to support Chelmsford and any other Essex Councils with similar ambitions, by making available suitable green spaces in its ownership for tree planting. Not only will this help reduce carbon in the atmosphere, as trees fix carbon in living biomass and soils for decades, but it will enhance the landscape, townscape and create habitat for wildlife.
